

PERMEABLE PAVING UNIT

Aqua-Loc®

4 1/2" x 9" x 3"

The need for a pervious concrete paving unit that allows water to permeate the soil has become increasingly important. Our municipalities now require that rain and storm water runoff be controlled and retained. Hanover's NEW Aqua-Loc® is available in a 4 1/2" x 9" x 3" unit with a score to appear as two 4 1/2" x 4 1/2" x 3" pieces. Like Hanover's EcoGrid®, Aqua-Loc® interlocks for stability and provides open space for drainage aggregate. Aqua-Loc® will provide the project with 10.6% open space allowing the water to be infiltrated at a rate of 7" - 8" per hour based on proper installation methods. Made to order in custom colors when quantities permit, Aqua-Loc® can be installed mechanically saving time and reducing costs.

Aqua-Loc® is a trademark of Advanced Pavement Technology.

Please Note: Sizes shown are nominal. Products are made to fit metric modules.
Overall dimensions include one spacer.
