

Hanover[®] Prest[®] Pavers for Roofs & Waterproofed Decks

Hanover[®] Prest[®] Pavers, high density pressed concrete units, are manufactured to 1/8" tolerances and produced by subjecting the concrete mix to a minimum pressure of 1,000 pounds per square inch over the entire surface area. This results in a product with the density and strength of natural stone.

Hanover[®] Prest[®] Pavers provide durability and protection for the roof or waterproofed deck system from harsh weather conditions. Hanover[®] Pavers make roofs and decks safer for pedestrians and simplify repairs. Hanover[®] Support Pedestals, together with Hanover[®] Pavers, provide effective drainage between the pavers and the system below. Hanover[®] Support Pedestals make roof and deck plazas serviceable, functional and attractive.

The test results displayed are taken from samples of Hanover's Prest[®] Pavers with a standard mix design. Hanover[®] Prest[®] Pavers, high density, hydraulically pressed concrete units, are manufactured to 1/8" tolerances and produced by subjecting the concrete mix to a minimum pressure of 1,000 pounds per square inch over the entire surface area. This results in a product with the density and strength of natural stone.

Pedestal[®] Paver

This patented paver incorporates the idea of an elevated paver drainage system with the use of an integral footed, concrete paver of the highest quality. An elevated clearance of 1/2" allows effective drainage.
